

Updated Visa Compliance Programs

Visa Global Risk announced earlier this year a change to the 2025 Visa Acquirer Monitoring Program ("VAMP") update. Since this announcement, Visa Global Risk has reviewed the VAMP and announced further clarifications and changes. These changes are aimed at reducing friction in the payment ecosystem, minimizing impact to our clients' operations, and incorporating industry feedback.

Changes to the VAMP include:

- Increased thresholds
- Augmented calculation
- Impact of pre-dispute solutions on VAMP Calculation

Verifi understands that this change has raised questions for our clients and partners. Please rest assured that Verifi solutions will continue to protect your business by reducing the effect fraud and disputes have on your operations. Under the new program, resolved CDRN and RDR cases and CE3.0 10.4 deflections will continue to prevent disputes, eliminating them from VAMP ratio calculations. In addition, CE3.0 deflected fraud notices (TC40) will be excluded from the calculation.
